Tubular Selection Software (J-Tube Mate) Available Online - Easy access anywhere you are -

Japan Oil, Gas and Metals National Corporation (JOGMEC) is pleased to announce that the software to conceptually select the tubular material for production wells in corrosive condition, so called "J-Tube Mate", is now on-line available.

This on-line software, "J-Tube Mate", is able to suggest a candidate material for the production tubular based on the estimation of corrosion rate and the possibility of the cracking by sulfide stress corrosion.

J-Tube Mate was developed as a software with the graphical user interface in the collaboration with Nippon Steel Corp (now Nippon Steel & Sumitomo Metal Corp) and Japan National Oil Corp (now JOGMEC), and was enhanced its capability. JOGMEC has supported oil companies with J-Tube Mate.

JOGMEC has decided to disclose J-Tube Mate via the internet service in order to be freely utilised by many engineers for design support, and for education of junior engineers in the industry.

You can freely access J-Tube Mate through the following URL.
